The Schaeffer Center at USC is one of the leading health policy research centers in the United States. Currently, the Schaeffer Center conducts research and policy analysis to support evidence-based health care reform. Studies underway focus on critical health policy issues related to health care spending and value, the impacts of public policy on pharmaceutical innovation, insurance design, the macroeconomic consequences of US health care costs and comparative effectiveness & outcomes research.

Time: 2:00 p.m.-3:30 p.m.
Location: The Schaeffer Center
3335 S. Figueroa St, Unit A
Los Angeles, CA 90089-7273

Joseph Doyle is an Associate Professor of Economics at MIT’s Sloan School of Management. He uses microeconomic theory and modern empirical methods to answer policy questions, particularly in healthcare and child welfare. Research topics include the returns to health care spending, the role of health insurance on treatment provided to patients and health outcomes, and effects of child welfare interventions such as foster care and juvenile detention on child outcomes. Professor Doyle received his PhD from the University of Chicago in economics in 2002.
